} smaller font, no outline, different color

Checks:
for valid email before submitting
More that I'm forgetting

Note: for creating admin accounts there should be some defining characteristic, such as email @animalassistedhspiness.org (makes it really easy, but not terribly practical), or have some other way to keep track of admin accounts in the database

ios vs. Android?

signed up differently

Personal calendar/registered events

when deleted, need to get rid of event from personal list and update the calendar list (still in the description?)/official list of who is attending

Hour tracking

build in functionality to look at their calendar and determine what event(s) they're volunteering for or have them select an event they're helping with from a list of events happening that day

Check:

need to make sure they're on the master list to be counted for hours
how do we deal with people that didn't show up but signed up?

Hours confirming/editing

The sketch shows a mobile app screen with a header bar containing 'back' and 'edit' buttons. The main content area includes a 'Title' field, 'Time in:' with a 'Stamp' button, 'Time out:' with a 'Stamp' button, and 'Hours: calculated'. At the bottom, there is a 'Log' button and a 'See other' link. Green annotations provide context: 'allows change to in and out times' points to the 'edit' button; 'get data from file' points to the 'Stamp' buttons; and 'updates log sheet/database' points to the 'Log' button.
